Parramatta Arabic School

Outline

- ✓ The Impact of Technology on Education
- ✓ Effective Tools for Online Learning
- ✓ Interactive Teaching
- ✓ Engaging Videos Using Canva
- ✓ Free Resources

Why?

Online

- Technology is a powerful tool that has changed how teachers teach and how students learn.
- It has provided people with access to education, different ways of communication and work together.
- Today it has become very important as a part of our teaching strategy to engage our students and make virtual teaching more fun and engaging.

The Impact of Technology on Education

- Recent changes have resulted in the adaption of **remote learning**
- To enhance the **students'** learning
- To make it more **enjoyable** and **fun**
- To make remote learning more **easier** and **engaging**
- To improve methods to teach **Arabic**, and make it similar to face-to-face learning
- To improve **self learning** to learn Arabic

No Hands App

No Hands^{-v1.0.2.2}

Random Student Selector - Now supports Unicode and configurable colours!

What is 'No Hands'?

'No Hands' random student selector is a small windows utility that randomly selects a Name from a class list. It is based on the idea that by randomly selecting pupils to answer questions, students feel more comfortable in answering teachers questions, and *all* students are more attentive as anyone in the class may be asked the next question.

In practice, students love this quick and fair way of student selection, and teachers can never be accused of favouritism or picking on a student too frequently.

'No Hands' is particularly suited to use with a smart-board as the application can be loaded with many class lists (consisting of a list of names and times when the class is taught) positioned and locked on the smart-board. Then whenever you need to select a pupil, run the application and a student for the current class will be selected. Click again and another student will be picked. You can optionally lock the utility to the screen so that the little darlings don't close it when your back is turned, and you can make it sit on-top of your other windows. There is also a manual override for the automatic class selection.

Screen shots of the application running in 'Normal' and 'Locked' mode;

- '*No Hands*' random student selector is a small windows that randomly selects a *Name* from a class list
- It is based on the idea that by randomly selecting students to answer questions, and they feel more comfortable in answering teacher's questions
